Removing static IP: Windows XP and Vista users

This manual is intended for users that had a connection with their Internet Service Provider through a static IP address. And now want to access the internet via ITC.

At ITC your IP/DHCP settings should be set at automatic or else you will not be able to log into the network.

Windows XP users:

- 1) Click on the start button
- 2) Then control panel
- 3) In control panel double click on network connections

4) In the **network connection window**, select the **Local Area Connection** (the network card that's connected to the network cable). Right click and choose **Properties**.

🕹 Local Area Connection Properties 🛛 🔹 🛛 🤶 🔀
General Advanced
Connect using:
Intel(R) 82566MM Gigabit Network C(Configure
This connection uses the following items:
 ✓ Signature ✓ Client for Microsoft Networks ✓ Signature ✓ Or Signature ✓ Client for Microsoft Networks ✓ Or Signature ✓ Thernet Protocol (TCP/IP)
Install Uninstall Properties
Transmission Control Protocol/Internet Protocol. The default wide area network protocol that provides communication across diverse interconnected networks.
Show icon in notification area when connected Notify me when this connection has limited or no connectivity
OK Cancel

5) In the Local Area Connection properties window select the Internet Protocol (TCP/IP) item.

6) Then click on **Properties**
